

Description

The AT-TDWS Water Sensors has been designed for use with the AquiTron™ and TraceTek series of alarm units.

The sensors construction allows it to be mounted either vertically or horizontally with the sensor tip facing down for application within an open tundish and any application where water is likely to pool or flow past the end of the sensor tips. Care should be taken not to short the tips against any metallic or conductive surface as this will create an alarm.

The AT-TDWS Water Sensors should be clipped in place (brackets and clips not included).

The AT-TDWS Water Sensors is fully submersible and dries in seconds to reset.

Important: All information, including illustrations, is believed to be reliable. Users, however, should independently evaluate the suitability of each product for their application.
