

Pump room application sheet

The possibility for both small and large water leak exist within pump rooms and plant rooms due to the large volumes of water that is delivered and handled through these rooms.

Installing the AquiTron AT-PROBE and positioning them adjacent to the pumps and main water equipment, drains or sumps will quickly alert operators or building owners of a problem

Multiple probes can be connected in series to provide complete coverage.

An interface to the monitoring control centre or BMS receives the notification of a leak via the local alarm panel positioned within the room.

Floor mounted water detection probe
